- Deodorizes

*EPA category IV (least toxic rating available)  
Disinfectant: Exempt from Warning and Caution  
label requirements. No "Note to Physician"  
"Hazards to Humans and Domestic Animals" or  
"First Aid" language required on the label.*

## A State of the Art Disinfectant based on Non-Toxic SDC® Technology

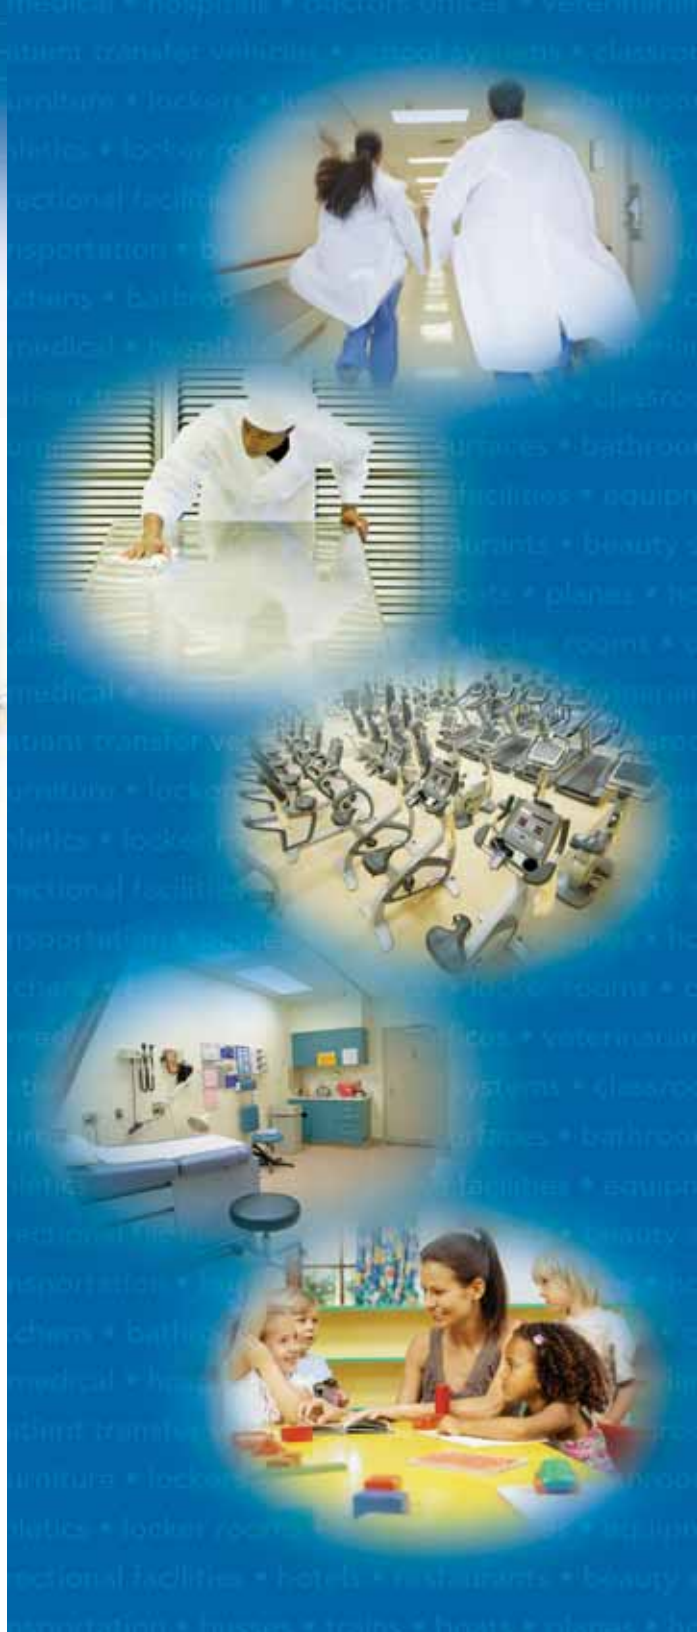

Most people don't realize that they are misusing their traditional disinfecting products. A review of the "fine print" on the back label will reveal that all disinfectants require a certain "wet contact time" (typically 10 minutes!) in order to do their work, as well as a requirement for the surface to be water rinsed afterwards. **BioSilver™** works in as little as 30 seconds\*—up to 20 times faster than traditional disinfectants, and with no rinse required.

**BioSilver** saves you time. A powerful, broad spectrum anti-microbial, **BioSilver** is labeled for use in diverse environments including restaurants, homes, medical facilities, institutions, day care facilities and on children's toys and play areas, with no rinse required.

**BioSilver** has been proven to destroy the toughest germs including MRSA, the new "superbug" which is now showing up in schools, homes, and athletic facilities.

Don't wait to become a statistic; the use of **BioSilver** in your routine maintenance program can help avoid disruption, relocation, expense, and loss of reputation.

## The Application of BioSilver

Spray or wipe **BioSilver** on the following objects and surfaces:

Tile, plastic, metal, glass, shower doors, floors, light switch covers, telephones, computer keyboards, door handles, children's toys, diaper tables and pails, bicycles, examination tables, bed rails, elevator buttons and doors, public toilet facilities.

## How BioSilver Works

**BioSilver** destroys bacteria, virus, and fungus by penetrating the cellular wall of the microbe and destroying it at the DNA level. Because of this, germs cannot develop resistance to **BioSilver**.

**BioSilver** provides a unique, 24 hour residual protection against common bacteria on surfaces properly treated. No other disinfectant can make this claim.

- Convenient to use around people, pets, and property. No need for relocation
- Kills MRSA and VRE in 2 minutes

- Medical– Hospitals and doctors offices, veterinarians, patient transfer vehicles
- School systems– Classroom furniture, lockers, lunchroom surfaces, bathrooms
- Athletics– Locker rooms, exercise facilities, equipment
- Correctional facilities
- Hotels
- Restaurants
- Beauty shops
- Transportation– buses, trains, boats, planes
- Homes– Kitchens, bathrooms, pet areas
